### Prevent Accidents Before they Happen...

SpeechPOD is the first portable, user programmable voice messaging system of its type.

SpeechPOD is designed to provide a call to action whenever a person is detected within the vicinity.

When triggered, the SpeechPOD will output a clear voice message to remind staff and visitors of a special risk or hazard.

- A voice message from the in built speaker announces 'Caution, this floor has just been cleaned and may be wet and slippery...please take care
- Blind and partially sighted persons are made fully aware of impending danger.
- SpeechPOD ensures that DDA (Disability Discrimination Act) requirements are met in full.

### Custom Voice Messages

SpeechPOD has the flexibility to allow users to program their own unique messages in one or more languages.

SpeechPOD is a truly universal product; any language; any risk; any location

SpeechPOD can be supplied as a stand alone product where the messages are selected by the on-board DIL switches.

Alternatively, you may purchase the infra-red remote control unit (part no CSA-IRR) to select messages, control volume, select time delays and also switch the SpeechPOD on and off when required.

The CSA-IRR is universal, and will operate any SpeechPOD that you may have on site. Site Managers need only attach the CSA-IRR to their key fob and operate any SpeechPOD

### Product Features Include:

- 7 user message areas
- Infra-Red Remote Control
- On board PIR Activation
- Pressure Pad Activation
- Door Contact Activation
- Adjustable Volume Control
- Battery or Mains Powered
- Portable or Fixed Install
- Tough ABS enclosure

### Slip & Fall Prevention...
